

YES4 E-LEARNING

1ST PRESS RELEASE

YES4eLearning: Supporting the Human Side of Digital Education

In response to the growing digital transformation of higher education, the Erasmus+ project **YES4eLearning – “Tools and Strategies for Supporting the Adaptation to E-Learning in Higher Education”** is paving the way for a more inclusive, engaging, and emotionally intelligent approach to online learning.

As universities across Europe continue to integrate digital technologies into their teaching practices, **YES4eLearning focuses on one essential element often overlooked in digital education:** the human factor. The project aims to enhance the competences of academics, educators, and students in managing emotions, motivation, and engagement in virtual learning environments.

Over its two-year implementation, **the consortium is developing a set of innovative tools, including an online assessment platform for emotional management, a comprehensive training package for higher education staff, and digital resources that help students adapt more effectively to online learning.** These outputs are being tested and refined through pilot activities in partner countries to ensure their quality and impact.

Coordinated by Klaipėdos Valstybinė Kolegija (Lithuania), the project brings together a strong European partnership that includes Gebze Technical University (Turkey), Universitat Politècnica de València (Spain), Institut Cal·lípolis (Spain), DEMETRIUS Association (Romania), and Falco & Associati (Italy).

The consortium's outreach strategy includes the launch of the official project website and social media channels, through which updates, learning materials, and success stories are being shared. The project will also organise a series of dissemination events and exhibitions to engage the higher education community and promote a more people-centred approach to digital learning.
